

Basic Python Exercises

There are 3 exercises that go with the first sections of Google's Python class. They are located in the "basic" directory within the google-python-exercises directory. Download the [google-python-exercises.zip](#) if you have not already (see the [Set-Up](#) page for details).

- **string1.py** -- complete the string functions in string1.py, based on the material in the [Python Strings](#) section (additional exercises available in string2.py)
- **list1.py** -- complete the list functions in list1.py, based on the material in the [Python Lists](#) and [Python Sorting](#) sections (additional exercises available in list2.py)
- **wordcount.py** -- this larger, summary exercise in wordcount.py combines all the basic Python material in the above sections plus [Python Dicts and Files](#) (a second exercise is available in mimic.py)

With all the exercises, you can take a look at our solution code inside the solution subdirectory.
